Omron provides tailored solutions

Flexible and integrated production business models

In today's globalized manufacturing environment, diverse and complex challenges arise and need to be overcome. The global market rapidly changes, and manufacturing companies are under increasing pressure to supply products in a timely manner that satisfy a wide variety of consumer needs. Omron industrial automation makes efficient, flexible and cost effective manufacturing possible.

Innovation

- New technology for smart manufacturing
- Collaboration between humans and machines
- Environmentally safe products

Productivity

- Integrated systems for optimized manufacturing
- Production data available in real-time
- In-line quality inspection: zero defects

Flexibility

- Quick product changeovers
- Openness and third party connectivity
- Scalable systems for optimum solutions

Reliability

- Non-stop processes, 24/7 operation
- Extended product lifecycle

Globalization

- Products meet global standards
- Local support for training, repairs and spare-parts supply
- Engineering environment compliance with global standards

- ✓ Through automation, Omron supports the advancement of manufacturing and contributes to a sustainable society by providing environmentally safe products

Sysmac: A fully integrated platform

Integration and Functionality

Sysmac is an integrated automation platform dedicated to providing complete control and management of your automation plant. At the core of this platform, the Machine Controller series offers synchronous control of all machine devices and advanced functionality such as motion, robotics and database connectivity. This multidisciplinary concept allows you to simplify solution architecture, reduce programming and optimize productivity.

✓ One Machine Controller

Complete integration of motion and logic sequence

FACTORY
AUTOMATION

MACHINE
CONTROL

Machine Automation Controller /
Industrial PC with Sysmac Machine Control

Motion

Filling line

- Motion Control: Integrated within the IDE, and operating in real-time
- Standard PLCopen Function Blocks plus Omron generated motion FB's
- Direct Synchronous control for Position, Speed and Torque

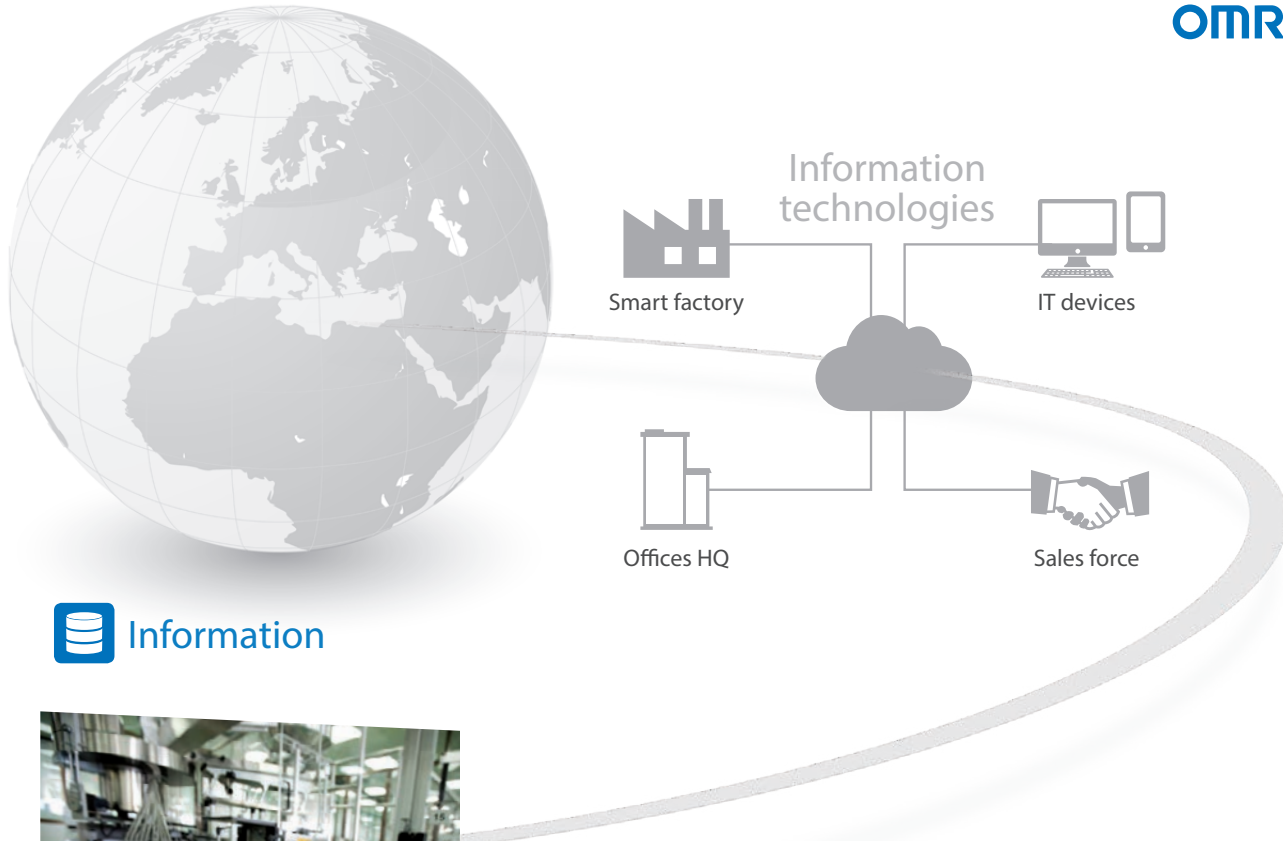

Safety

Assembly

- The simplest way to integrate safety improves productivity and safety
- The PLCopen® safety FB's simplify and accelerate the development process

✓ One Integrated Development Environment software for Configuration, Programming, Simulation and Monitoring

 Information

- Sysmac communicates in real-time with Databases such as SQL
- Secure Data: In the event of a server going down or losing communications, data is automatically stored in internal memory
- Sysmac operates with Databases at high speed [1000 table element/ 100 ms] ensuring realistic Big Data Processing to improve productivity and aid predictive maintenance etc.

- ✓ **Integrated Automation Control:**
The Sysmac platform is scalable and provides the performance and functionality for a wide range of solutions from simple machines through to manufacturing cells

 Vision

- Higher resolution images available without increasing the vision processing time
- Shape search technology: Provides more stable and accurate object detection for Pick & Place projects

 Robot

- One controller integrates two different types of engines, one based on cyclic scanning (PLC feature) and another based on procedural programming (robot feature), providing direct control of robots

 Sensing

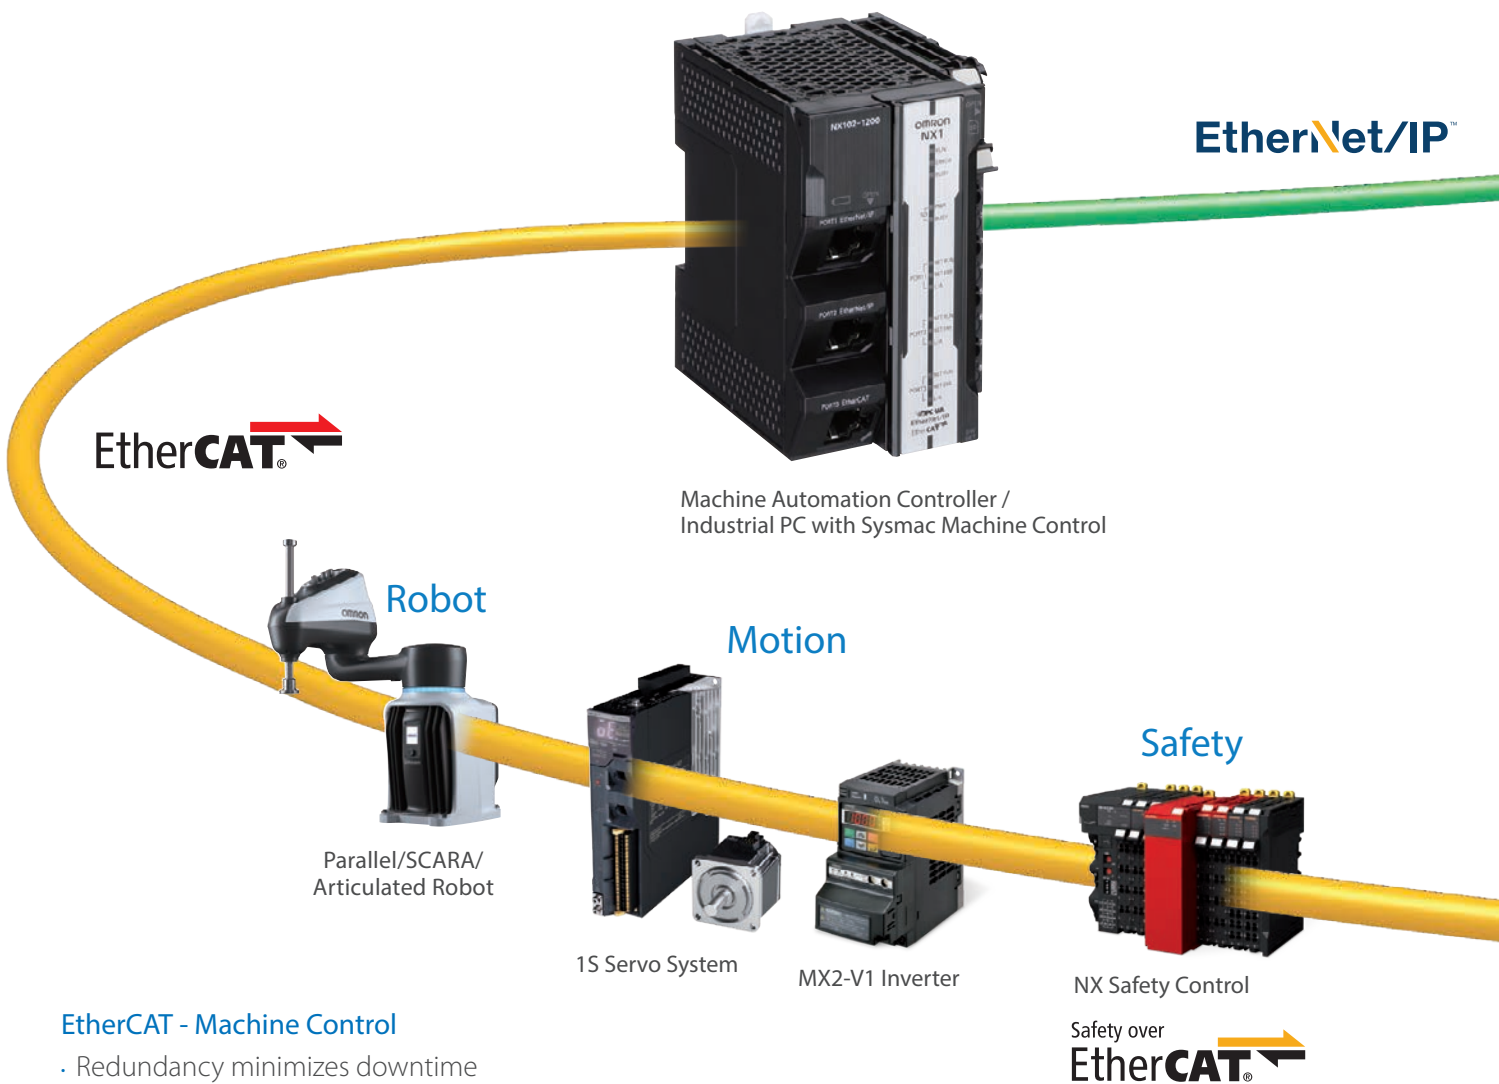

- Full control of the process parameter setting and predictive maintenance functions
- High precision detection and positioning data synchronized on the network

One Connection

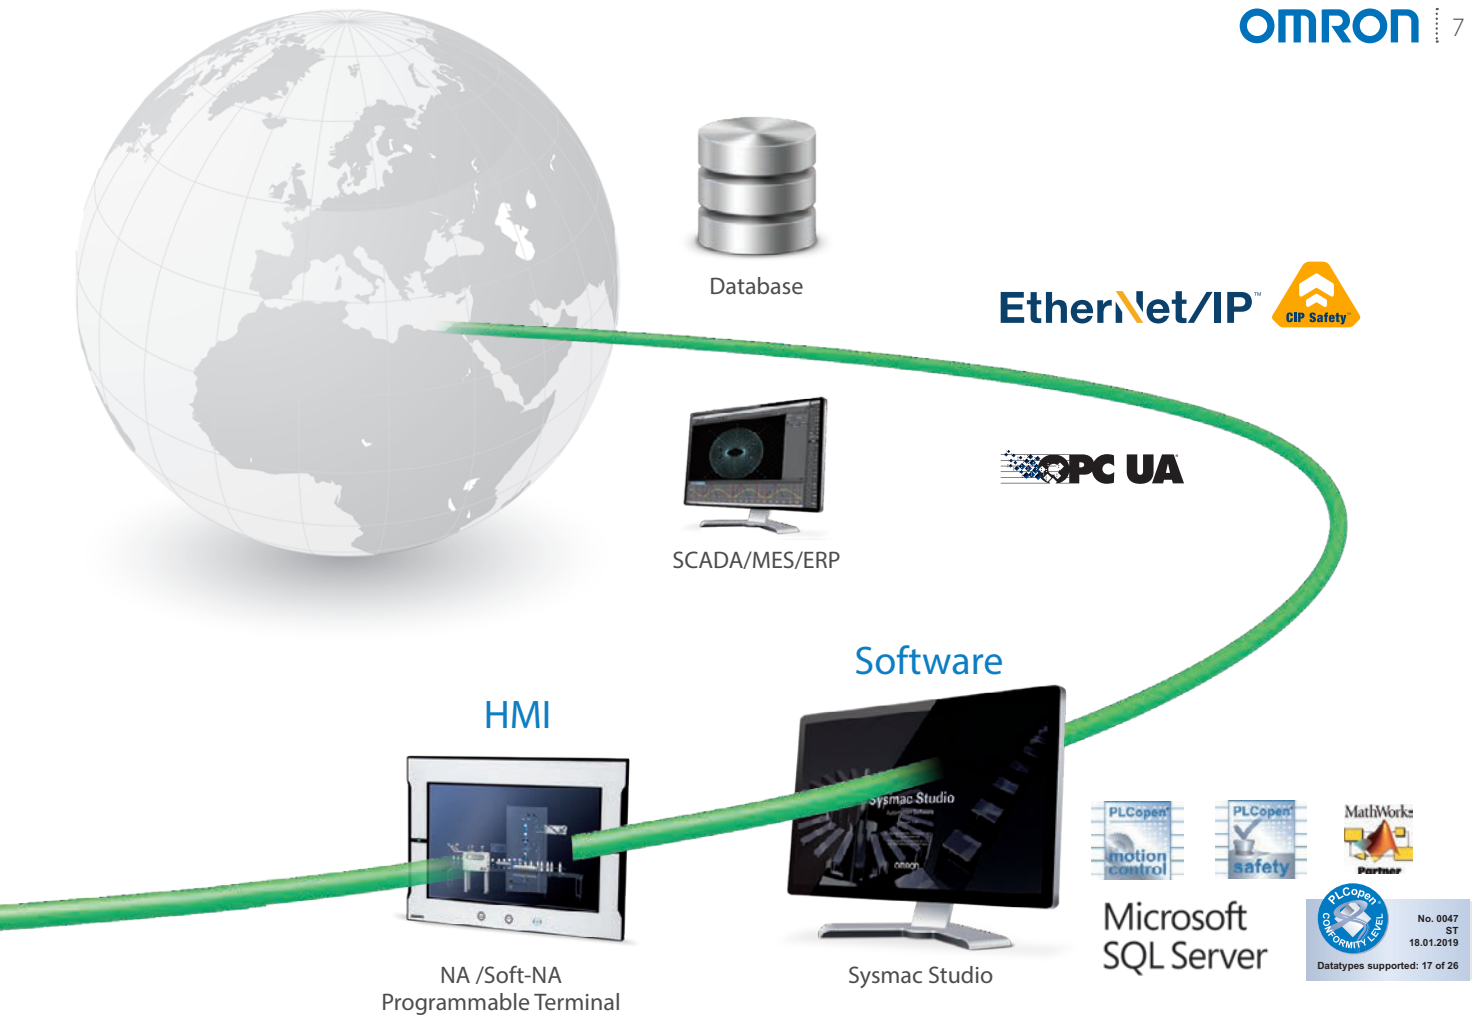

Seamless machine control and factory automation

One machine control through one connection and one software is how we define the Sysmac automation platform. The Machine Automation Controller integrates logic, motion, safety, robotics, vision, information, visualization and networking under one software: Sysmac Studio. This one software provides a true Integrated Development Environment (IDE) that also includes a custom 3D motion simulation tool. The machine controller comes standard with built-in EtherCAT and EtherNet/IP. The two networks with one connection purpose and integrated safety are the perfect match between fast real time machine control and data plant management.

EtherCAT - Machine Control

- Redundancy minimizes downtime
- Flexible system configuration using a variety of slaves
- Fast and precise: Fastest cycle time of 125 μ s, synchronization with 1 μ s jitter
- 512 slaves
- Embedded in Omron servo drive, inverter, I/O, Safety, Vision and Sensing
- Uses standard STP Ethernet cable with RJ45 connectors
- One connection using Safety over EtherCAT (FSoE) protocol

Ethernet - Factory Automation

- Peer-to-Peer controller communication
- Interface with Sysmac Studio , NA HMI or SCADA software
- Database connection for Microsoft SQL Server, Oracle, IBM DB2, MySQL and Firebird
- FTP server
- Safety integrated via CIP Safety
- Secure cloud connection by MQTTS communication

One Software

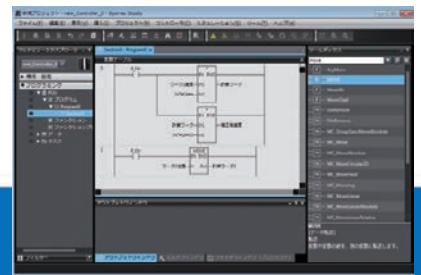

One Integrated Development Environment Software

Created to give you complete control over your automation system, Sysmac Studio integrates configuration, programming and monitoring. Graphics-oriented configuration allows quick set-up of the controller, field devices and networks while machine, motion, and safety programming based on IEC standard and PLCopen® Function Blocks for Motion Control and Safety cuts programming time. Smart Editor with On-line debugging helps quick and error free programming. Advanced simulation of sequence and motion control, and data trace reduce machine tuning and set-up.

Design

Reusable programs

Programming with variables

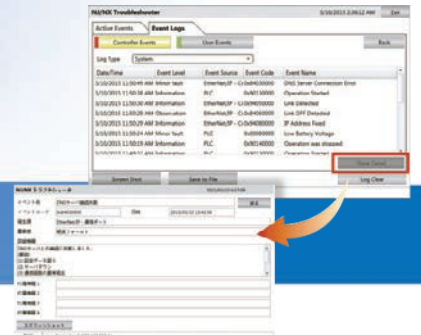

One Integrated Development Environment software Sysmac Studio is fully compliant with the open standard IEC 61131-3. Programming with variables eliminates the need to learn the internal memory map of the PLC and allows the programs to be reused.

Maintenance

Highly efficient maintenance

Troubleshooting

Troubleshooting in the Sysmac Studio and NA Programmable Terminal can manage errors across the entire system including the controller. You can check details of errors and solutions without reading manuals.

*1.This function can be used by applying the Team Development Option to Sysmac Studio version 1.20 or higher.

Project version control function is supported by CPU Unit version 1.16 or later.

*2. Available with the Sysmac Studio 64-bit version. 3D CAD data supports STEP/IGES.

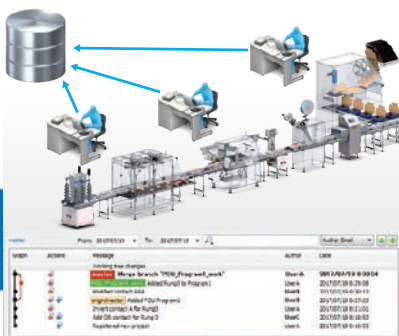

**Collection of software functional components
Sysmac Library**

Packed with Omron's rich technical know-how, the Function Blocks in the Sysmac Library for advanced applications and motion control cut programming time.

Development by multiple developers

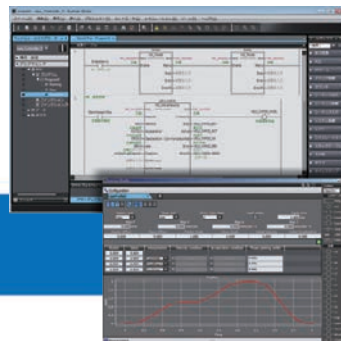

Project version control function*1

When you develop a project at the same time as your colleagues, the Sysmac Studio combined with the version control system (Git™) merges changes automatically and resolves conflicting changes. This makes merging easier and faster. You can even revert to the previous revision after graphically comparing the current project with a previous one.

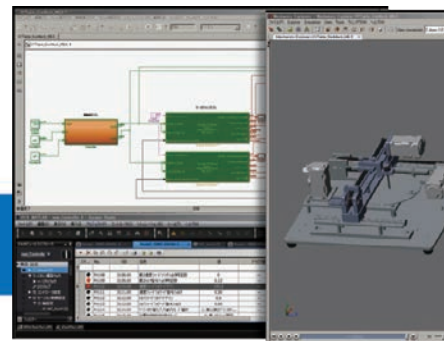

For advanced machine control

Motion programming

Advanced motion control applications can be created quickly just by combining PLCopen® Function Blocks for Motion Control.

Model-Based design

Complex feedback control that is designed with MATLAB®/ Simulink® can be imported into programs.

Verification

Fast system debugging

Remote maintenance

Movement of the machine connected online can be displayed on the CAD in real time, and movement can also be reproduced from the trace data. Maintenance and troubleshooting can be performed in remote locations.

Virtual mechanical debugging

NEW Enhanced by 3D simulation option*2

Use only the Sysmac Studio with loaded 3D CAD data*2 for 3D simulations. Operation of a control program can be verified in a virtual environment, improving program accuracy during design and reducing rework during verification using physical devices.

Debugging in conjunction with a third-party simulator is possible.

For more information, see the video:
www.fa.omron.co.jp/3d-simulation_e

One Machine Controller

NJ/NX/NY Machine Automation Controller

Powerful, yet easy to configure

The NJ/NX/NY Controller is at the heart of the Sysmac platform. One integrated controller is designed to meet extreme requirements in terms of logic sequence and motion control speed and accuracy. Standard programming and open networks make it easy to build your automation system.

High-speed, high-precision control*1

Architecture based on Intel® Core™ processor significantly speeds up the execution of instructions (basic instructions 0.37 ns, math instructions for Long Real Data 3.2 ns). Command values to send to servomotors and stepper motors can be updated as fast as every 125 μs. This enables smooth cam motion and high-precision interpolation and phase adjustment between axes.

Complete integration of motion and logic

One controller integrates logic, motion, vision and information for complete control and management of machines. Position, displacement, and tension information collected from sensors can be quickly and easily fed back to the motion control.

Integrated safety into machine control*3

The controller integrates safety control into machine control in lines that require fast cycle times. It also integrates two different open networks: EtherNet/IP for safety control in production lines and EtherCAT for safety control in machines.

*1. Performance of NX701-1□□0

*2. Based on Omron investigation in February 2015.

*3. Performance of NX102-□□□□ and NX-SL5□□0

*4. Database connection CPU unit:
NX102-□□20/NJ□01-□□20

*5. Performance of NX701-1□□□/NX102-□□□□/ NJ501-1□□0

*6. Performance of NX102-□□□□/NX1P2-□□□□

*7. Performance of NX102-□□□□

Fast machine data storage in database*4

The controller connects directly to a database without the need for a gateway. The special instructions allow easy access to the database.

Real-time data collection enables productivity improvement, predictive maintenance, and quality traceability.

Supported database

- Microsoft SQL server
- Oracle Database
- IBM DB2
- MySQL
- PostgreSQL
- Firebird

Secure host connection

OPC UA is an IEC communication protocol which is listed as a recommendation for Industrie 4.0 and PackML. The controller comes equipped with an OPC UA server interface and provides a secure connection to IT systems such as MES and ERP.*5

The controllers provides a easily and secure connection to the cloud by using MQTT Communications Library.*6

Standard programming

- Fully conforms with IEC 61131-3 standards
- PLCopen Function Blocks for Motion Control

Global standard networks

EtherCAT
Standard Machine Network

Safety over
EtherCAT

EtherNet/IP
Standard Factory Network

Collection of software functional components Sysmac Library

- FB library option for advanced applications (vibration suppression, temperature control, motion control...)
- High quality products with reliable global support

Drive machine innovation by increasing speed

Case 1: High-speed alignment and vibration-free handling

Problems

1. Precisely stacking many sheets increases cycle time because retries caused by mechanical errors increase positioning time.
2. Vibration settling time is required when high-speed handling is stopped. Speed must be reduced to suppress vibration.

1. High-speed, high-precision alignment system

The FH Vision System provides the Shape Search function for fast and accurate shape recognition and Visual Feedback that feeds back the current position to control the motor in every measurement cycle. These increase alignment speed without sacrificing accuracy.

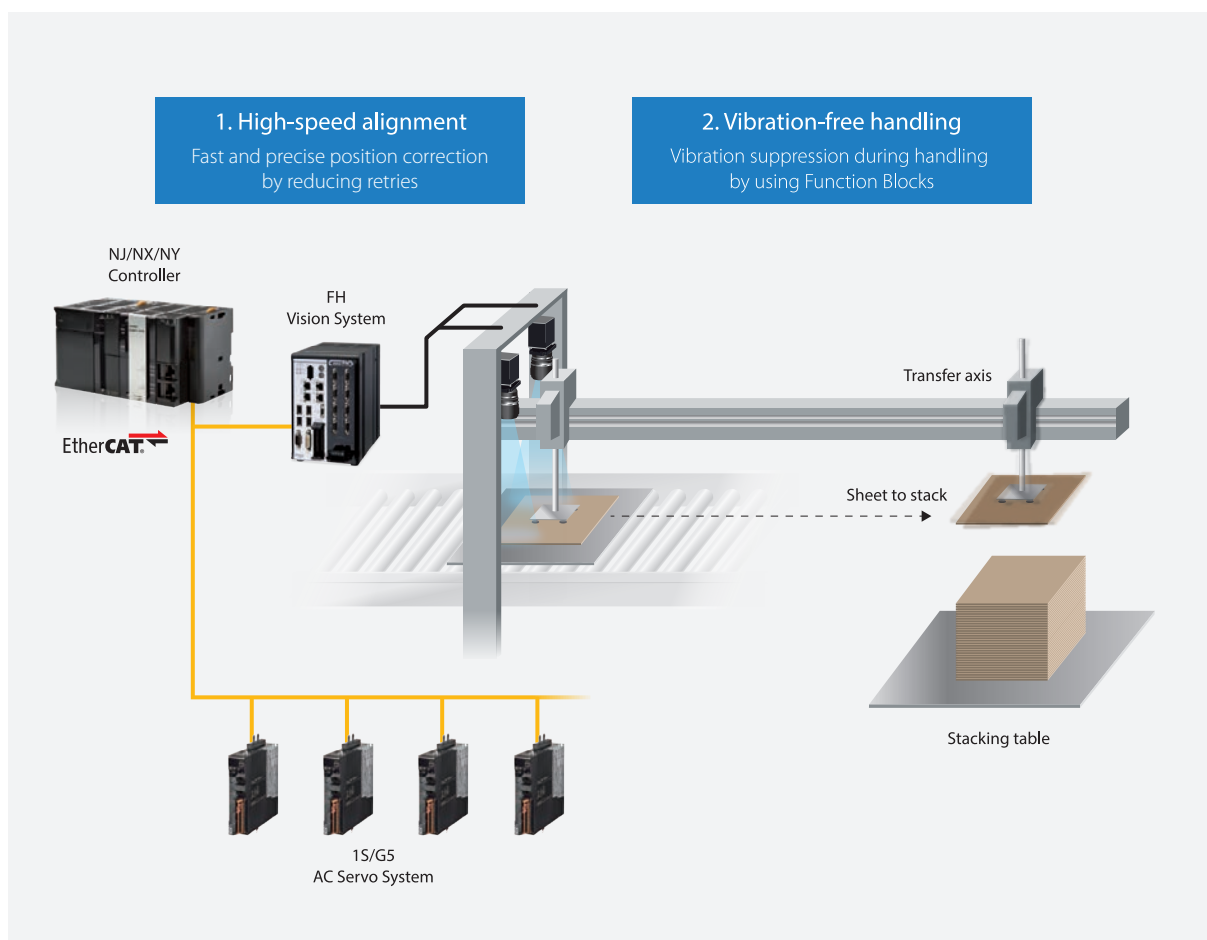

Visual Feedback Alignment Library

2. Software functional components for vibration suppression

The Vibration Suppression Library facilitate programming for high-speed handling while suppressing vibration. Waiting time is reduced, and positional accuracy is increased.

Vibration Suppression Library

and precision and maximizing uptime

Case 2: Redundancy minimizes downtime

Problems

1. It takes time to recover from an unexpected production line stop, significantly reducing uptime.
2. The safety system stops the entire line due to disconnection or other causes even when there is no danger.

Cable Redundancy

Even if a part of the EtherCAT network is disconnected, Cable Redundancy provides continuous connectivity. This function allows you to fix disconnection without stopping the machines and production line where one controller provides both machine and safety control.

The line stops only when operators are in danger, which ensures safety.

Sysmac Family

Controller

NX1 Machine Automation Controller CPU Unit

Compact size controller integrates production line and IT systems

Improve productivity, improve your business

The NX1 can utilize information, take safety measures, and control quality while at the same time improving production efficiency through high-speed, high-precision control.

Fulfilling functions in compact size

Three industrial Ethernet ports and a power supply are housed in a compact design with a width of 66 mm. The multicore microprocessor and OPC UA connectivity enable information utilization without compromising control performance.

Robot Integrated CPU Unit NJ501-R@@@

Integration of logic, motion, Omron Robot and kinematics in one CPU

Industry first*:

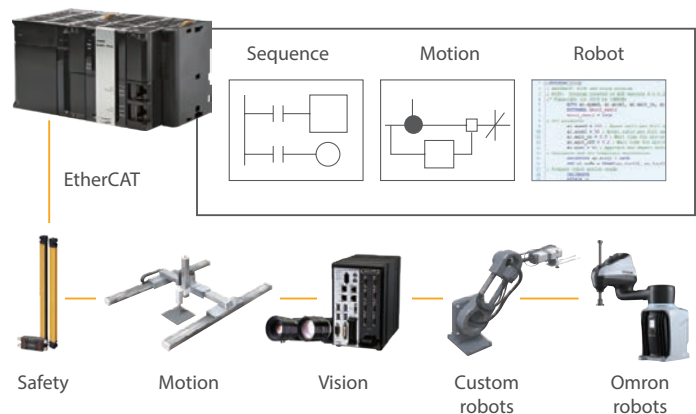

Integrated control of different engines

Omron is the first in the industry* to provide a controller that integrates two very different types of engines _ one that works in program scan cycles (PLC feature) and another based on procedural programming (robot feature) _ and synchronizes their program tasks and I/O refreshing.

Collection of truly useful data

Devices such as robots and motion/vision sensors can be connected to an EtherCAT network for synchronized control. This synchronization ensures that the data collected on these devices is concurrent and therefore truly useful for visualizing facility operation.

Robot integrated CPU unit NJ501-R

* Based on Omron investigation in November 2019

1S Series with Safety Functionality R88M-1A□/R88D-1SAN□-ECT

Higher Productivity and Safer Environment

Quick Installation : One Cable

- Power, encoder and brake in one pre-assembled cable with IP67 connector
- Pluggable connectors for easy pre-wiring and system maintenance
- Fast and secure screw-less push-in in all connectors

20 bit high resolution encoder

- No battery, no maintenance and compact size

Time Reduction: Integrated Programming and Testing

- Auto definition of I/F variables
- Motion safety function blocks
- Graphical GUI
- Integrated Data Trace

High adaptability for machine safety

- 8 safety functions according to SIL3/PLe (STO, SS1, SS2,SOS, SLS, SLP, SDI, SBC)
- Safety-over-EtherCAT (FsoE)

EtherCAT®

Safety over
EtherCAT®

R88M-1□/R88D-1SN□-ECT 1S AC Servo System

Improved machine design. Increased machine productivity

Optimized installation and commissioning tasks

- Cabinet size reduction: Compact servo drive with same height throughout the whole power range
- Fast and secure screw-less push-in in control I/O connector and brake interlock connector

23 bit high resolution encoder

- No battery, no maintenance and compact size

Multi-axis setup and tuning

- Configure and monitor multiple axes in one view
- Easy & fast parameter transfer among axes in the machine (up to 256 axes)
- Comprehensive gain tuning

Safety control via EtherCAT

Motion

3G3MX2-A□□□□-V1

MX2-V1 Multi-function Compact Inverter

Born to drive machines

Torque control in open loop

- Ideal for low to medium torque applications
- Can replace a flux vector inverter or servo drive in suitable systems

Quick response to load fluctuation

- Stable control without decreasing machine speed improves quality and productivity

Safety inside

- Conforms to safety norm ISO 1384901 Cat. 3 performance level PLd
- 2 Safety inputs
- External device monitoring (EDM)

Other Features

- Maximum applicable motor capacity: 15 kW
- Double rating (CT: Heavy load/VT: Light load)
- Permanent magnet motors
- Drive Programming
- Built-in brake control function

EtherCAT 

3G3RX2-□□□□□

RX2 High-function General-purpose Inverters

Save energy and maximize performance with versatile inverter

- Triple rating: Normal Duty (ND), Low Duty (LD), and Very Low Duty (VLD)
- PM motor control helps save energy
- Safety function IEC 61800-5-2 "Safe Torque Off (STO)" Conforms to machinery directive with ISO13849-1 (Category 4/PLe)
- Drive Programming allows simple sequence control without a PLC
- EtherCAT communication using an optional communication unit provides high-speed communication for running and stopping, monitoring operating status, and changing various settings

I/O

NX I/O-System

Speed and accuracy for machine performance

Based on an internal high-speed bus running in synchronization with the EtherCAT network and using the time-stamp function, the NX I/O can be controlled with microsecond accuracy and with nanosecond resolution.

The I/O range consists of over 100 models including position control, temperature inputs and integrated safety.

Communications coupler

- EtherCAT®
- EtherNet/IP™

IO-Link master

- Up to 4 IO-Link devices with one master

Serial communications

- RS-232C or RS-422A/485 interface

RFID

- Direct connection to V680 RFID System

Digital I/O

- 4, 8, 16, or 32 channels per input unit
- 2, 4, 8, 16, or 32 channels per output unit (8 channels per relay output unit)
- 16 channels per mixed I/O unit
- Standard, high-speed, and time-stamp models
- Units with Push-In Plus/MIL/Fujitsu/M3 Screw connector

Analog I/O

- +/-10V voltage and 4-20 mA current signals
- 2, 4 or 8 channels per input unit
- 2 or 4 channels per output unit
- Standard and high-performance models
- Single-ended input and differential input models

High-speed analog input

- 4 channels per input unit
- Differential input
- Sampling as fast as every 5 μs

Load cell inputs

- One load cell with one unit
- Fastest conversion cycle of 125 μs

Safety CPU

- EN ISO13849-1 (PLe/Safety Category 4), IEC 61508 (SIL3) certified

Safety I/O

- 4 or 8 safety input points per unit
- 2 or 4 safety output points per unit
- Free allocation of the safety I/O units on the internal high speed bus

Temperature inputs

- Thermocouple or RTD inputs, 2 or 4 per unit
- Conversion time of 10 ms, 60 ms or 250 ms

Heater burnout detection

- 4 CT sensor inputs and 4 trigger outputs to drive SSRs

Temperature control

- 2 or 4 multi-input (thermocouple and resistance thermometer) channels per unit
- Conversion time of 50 ms
- Voltage output (for driving SSR) or linear current output
- 1 CT input per channel

Position interface

- Incremental and absolute encoder support
- Pulse output unit (line driver output model)

Lineup

Series		NX Series
Features		<ul style="list-style-type: none"> · Over 100 models including digital I/O, analog I/O, position interface, temperature inputs, temperature control, RFID, safety CPU, and safety I/O · NsynX technology provides I/O response with less than 1 μs jitter · Screwless terminal block, connector, and M3 screw types · Up to 32 channels per digital input unit or output unit
Appearance		
Type		Modular I/O
Communications interface		EtherCAT
Number of connectable units		<ul style="list-style-type: none"> · 63 units max. · Input: 1,024 bytes max., output: 1,024 bytes max.
Unit types		Communications coupler, IO-Link master, serial communication, RFID, digital I/O, analog I/O, high-speed analog input, load cell input, safety I/O, safety CPU, temperature input, heater burnout detection, temperature control, position interface
Mounting		DIN track
Detailed specification	Catalog	R183

* See page 27 for more information on safety I/O.

Series		GX Series
Features		<ul style="list-style-type: none"> · Detachable screw terminal block and e-CON connector types · Easy set-up: automatic and manual address setting
Appearance		
Type		Block I/O
Communications interface		EtherCAT
Number of connectable units		One expansion unit can be connected with one digital I/O terminal (16 inputs + 16 outputs)
I/O types		Digital I/O, analog I/O, encoder input, IO-Link master, expansion unit
Mounting		DIN track
Detailed specification		Refer to your OMRON website.

Sysmac Family

Safety

NX-SL5/SL3/SI/SO Safety Control Unit

Integrated safety into machine automation

Modular machines with individual CPU units

Safety is integrated via EtherNet/IP for safety communication between machines and EtherCAT for high-speed, high-precision fieldbus communication in a machine.

It is easy to set up motion or a robot, which are the key to quality and productivity enhancement, via one cable.

Simple and flexible integration of safety

Flexible system lets you freely mix safety I/O units with standard NX I/O.

Integration in One software, Sysmac Studio

Safety I/O wiring diagrams, safety circuit programs, and user-defined Function Blocks can be automatically generated, minimizing safety design errors. Simple Automatic Test using Offline Simulation is available. Online Functional Test ensures and maintains safety during machine commissioning and operation.

Lineup

Safety Controller

Product name	Safety CPU Unit	
Model	NX-SL5500/5700	NX-SL3300/3500
Features	Two different networks, Safety over EtherCAT (FSoE) and EtherNet/IP (CIP Safety), in a single system	Integrated safety into machine automation through the use of Safety over EtherCAT (FSoE) protocol.
Appearance		
Network	Safety over EtherCAT (FSoE), EtherNet/IP (CIP Safety)	Safety over EtherCAT (FSoE)
Applicable standards	EN ISO 13849-1 (PLe/Safety Category 4), IEC 61508(SIL3), IEC/EN 62061(SIL CL3), IEC/EN 61131-2, IEC 6132-3-1, IEC 61131-6	EN ISO 13849-1 (PLe/Safety Category 4), IEC 61508 (SIL3), EN 62061 (SIL CL3), IEC/EN 61131-2, IEC 6132-3-1
Programming	<ul style="list-style-type: none"> · IEC 61131-3 standard · PLCopen Function Blocks for Safety 	
Program capacity	2048 KB, 4096 KB	512 KB, 2048 KB
Safety I/O connection	128/254	32/128
Maximum number of safety I/O points	1024, 2032	256, 1024
Units that can connect	NX102 CPU Unit, Communication Control Unit	NX102 CPU Unit, EtherCAT Coupler Unit, EtherNet/IP Coupler Unit
Detailed specification	Catalog : F104	Refer to your OMRON website.

Product name	Safety Input Unit	Safety Output Unit
Model	NX-SIH400/SID800	NX-SOH200/SOD400
Appearance		
Applicable standards	EN ISO 13849-1 (PLe/Safety Category 4), IEC 61508(SIL3), IEC/EN 62061(SIL CL3), IEC/EN 61131-2, IEC 6132-3-1	
Number of safety input/output points	4, 8	2, 4
Detailed specification	Refer to your OMRON website.	

Sysmac Family

Vision

FH Vision System

Flexible solution for machine vision

The FH Vision System is optimized to detect the position and orientation of any object at high speed and with high accuracy. The built-in EtherCAT communications enable reliable and easy networking with motion control, increasing the overall machine performance. A flexible machine vision tailored for quality inspection.

Advanced shape search technology

High-precision and robust positioning is possible even under the adverse conditions, such as changes in environments and materials.

FHV7 Smart Camera

Designed for pre-alignment and appearance inspection

The FHV7 Smart Camera is an all-in-one camera with the functionalities of the high-spec FH Vision System packed in its compact, robust body that is easy to deploy. It offers the same operability as the FH Series, allowing for easy integration into even processes where it was previously difficult to install advanced vision systems.

IP67 waterproof structure

IP67 protection allows use in wet conditions, such as regular wash-downs at the sites where the cameras are installed.

Advanced shape search technology

The shape search technology that provides the same level of performance as the FH Series has been implemented.

Unique lineup

- The camera lineup includes up to 20.4 Mpix camera
- The MDMC light flexibly changes illumination colors and angles according to items to inspect

Multiple inspection

- Powerful 4-core i7 parallel processor
- Up to 8 cameras per controller

AI Scratch Detect Filter (Software sold separately)

The AI Scratch Detect Filter learns by means of images in which human inspectors noticed defects. Where as previous inspection methods found the unexpected size, shape or color of a particular defect to be a barrier to automation, AI successfully extracts abnormalities.

Robust all-in-one camera for easy integration into machines

Autofocus lens

The autofocus lens covers a focal length range from 59 to 2,000 mm*. Even when products in different sizes are produced, the focus range can be changed easily by parameters. This feature eliminates mechanical operation for changeover during product replacement, leading to a simpler system with higher productivity.

* Differs depending on the lens type.

Lineup

Product name		Vision System		Smart Camera	
Series		FH Series		FHV7 Series	
Appearance					
Hardware	Processing speed * 1	★★★		★★	
	No. of connectable cameras	8 max.		1	
	Resolution	0.4 million-pixel/2 million-pixel/4 million-pixel/5 million-pixel/12 million-pixel	5 million-pixel/20.4 million-pixel	0.4 million-pixel/1.6 million-pixel/3.2 million-pixel/5 million-pixel	6.3 million-pixel/12 million-pixel
	Shutter method	Global shutter	Rolling shutter	Global shutter	Rolling shutter
	Lens	Interchangeable (C mount, M42 mount)		Interchangeable (C mount)/autofocus (mechanical, liquid lens)	
Light	External light connectivity/special light connectivity (MDMC * 2, PS * 3)		Built-in light (white, red, infrared, multi-color)/external light connectivity/special light connectivity (MDMC * 2)		
Software	User interface	Flexible interface	 <p>Main screen</p>	 <p>Measurement flow setting screen</p>	 <p>Measurement condition setting screen</p>
Detailed specification	Catalog	Q197		Q264	

* 1. The more starts, the higher the performance.

* 2. Multi-Direction Multi-Color. The MDMC light can be adjusted to defects by freely combining the illumination directions, colors, and light intensities.

* 3. Photometric Stereo.

Sysmac Family

Sensing

ZW-8000/7000 Confocal Fiber Displacement Sensor

Measure anything from anywhere The most reliable in-line measurements

The ZW-8000 Series provides high-precision in-line measurements of rattling or inclined shiny, thin, or minute parts. The ZW-7000 Series provides ultra-high-speed, stable measurements of diffuse reflective objects during movement. These sensors help increase quality inspection accuracy and reduce inspection time.

Reliable measurements for any material and surface types

The white light confocal principle allows a continuous measurement of object in any mixed conditions such as mirror, coarse, transparent, curved, or narrow areas without stopping the sensor head.

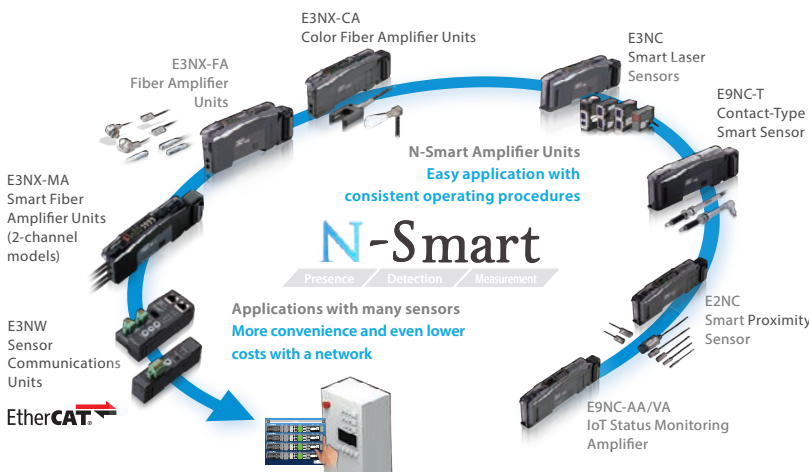

- Angle characteristic: $\pm 25^\circ$ for shiny surfaces
- Linearity for different materials: $\pm 0.3 \mu\text{m}$
- Minimum sampling period: $20 \mu\text{s}$
- Minimum spot diameter: $4 \mu\text{m}$

Note: Specifications differ among models. Please ask Omron sales representative for details.

E3NX/E3NC/E9NC Series N-Smart Series

Various sensors connected over EtherCAT

The N-Smart lineup of next-generation fiber sensors, laser sensors and contact sensors will quickly solve your problems and therefore maximize uptime and minimize downtime with optimum cost performance.

Features

- Ultra-easy Advanced Smart Tuning with the push of a button
- More stable detection of high-speed workpieces
- Predictive maintenance to reduce downtime
- Highly visible white LED display
- E3NX-FA has 1.5x the sensing distance of conventional amplifiers*

* Compared with E3X-HD

Lineup

Product name		Confocal Fiber Displacement Sensor		
Series		ZW-8000 Series	ZW-7000 Series	ZW-5000 Series
Feature		For measurements of rattling or inclined "transparent objects or mirror surfaces" such as thin film sheets or glass	For accurate shape measurements of "coarse surfaces" while the sensor head is moving	Bring the benefits of the white light confocal principle to production lines
Appearance				
Measurement method		White light confocal principle		
Measuring range		Min : 7±0.3 mm, Max : 30±2 mm		
Static resolution		0.002 to 0.016 μm		
Linearity		±0.3 to ±3.0 μm		
Spot diameter		4 to 11 μm	50 to 190 μm	9 to 20 μm
Measurement cycle		60 to 7500 μs	20 to 400 μs	80 to 1600 μs

Robot

iX3/iX4, eCobra/i4H, Viper Parallel Robot, SCARA Robot, Articulated Robot with EtherCAT (Connectable to NJ501-R)

Robots for flexible production lines

Omron's parallel, SCARA, and articulated robots are designed to be directly controlled by the NJ501-R Robot Integrated Controller that is connected to the robots via EtherCAT.

Parallel robots

The Hornet and Quattro are parallel robots ideal for use in the food and beverage, pharmaceutical, and healthcare industries. The iX4 that is a four-axis parallel robot with a high payload capacity achieves high speed and high precision.

- Fast and high-precision conveyance and assembly
- Supports fast Pick & Place on a fast conveyor
- Maximum working range: 1130, 1300, and 1600 mm models

iX3 565
iX4 650/800

SCARA robots

High-performance four-axis SCARA robots are ideal for mechanical assembly, material handling, packaging, machine tending, and screw driving.

Table/floor or Inverted mounting models are available.

- High repeatability suitable for material handling and precision assembly
- Reach: i4H: 650, 750, and 850 mm models
eCobra: 600 and 800 mm models

eCobra 600/800
i4H 650/750/850

Articulated robots

Six-axis articulated robots are ideal for mechanical assembly, material handling, packaging, and palletizing.

- Diagnostics display enables faster trouble shooting
- High accuracy, superior slow-speed following, and easy calibration
- Reach: 653 and 855 mm models

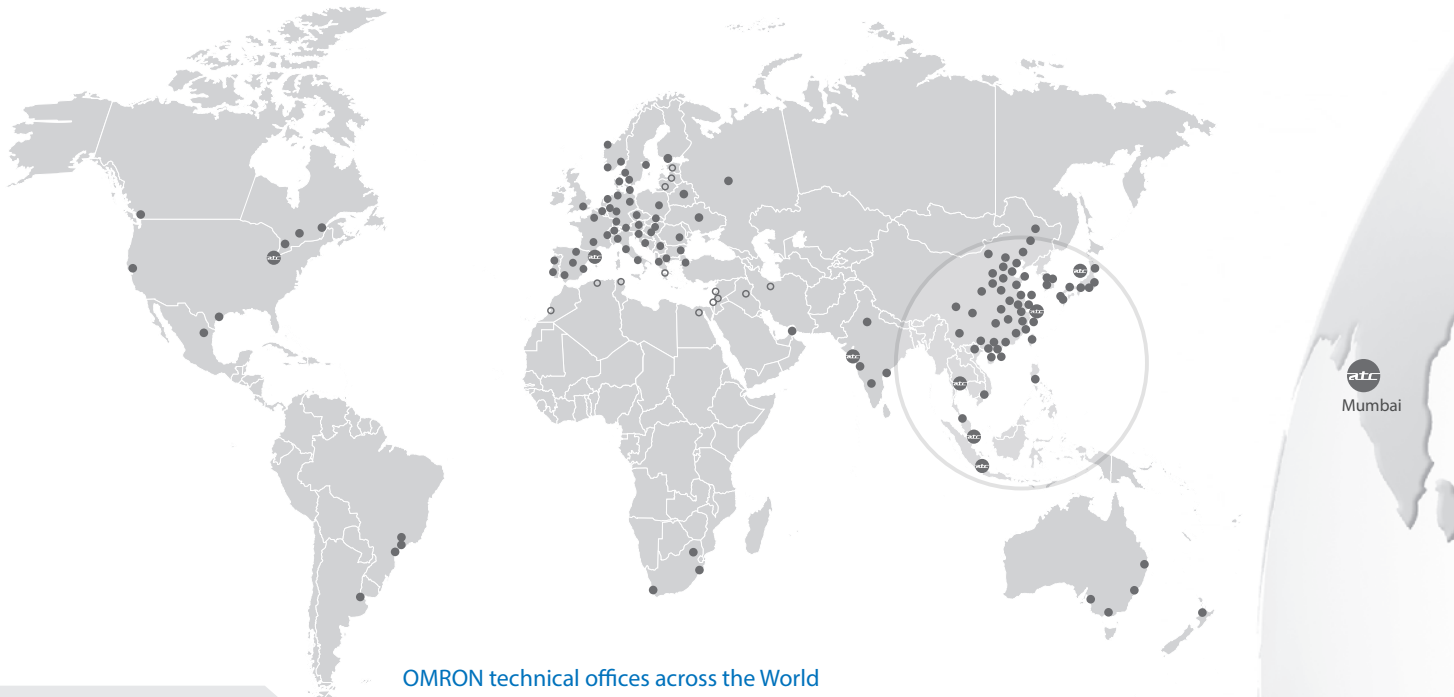

Viper 650/850

Lineup

Series	iX3 565	iX4 650/800	eCobra 600/800
Feature	Parallel robot ideal for use in the food and beverage, pharmaceutical, and healthcare industries	Four-axis parallel robot achieves high speed and high precision	Mid-size/large SCARA robot for precision machining, assembly, and material handling

PRESENCE

COMPETENCE

OMRON

Design

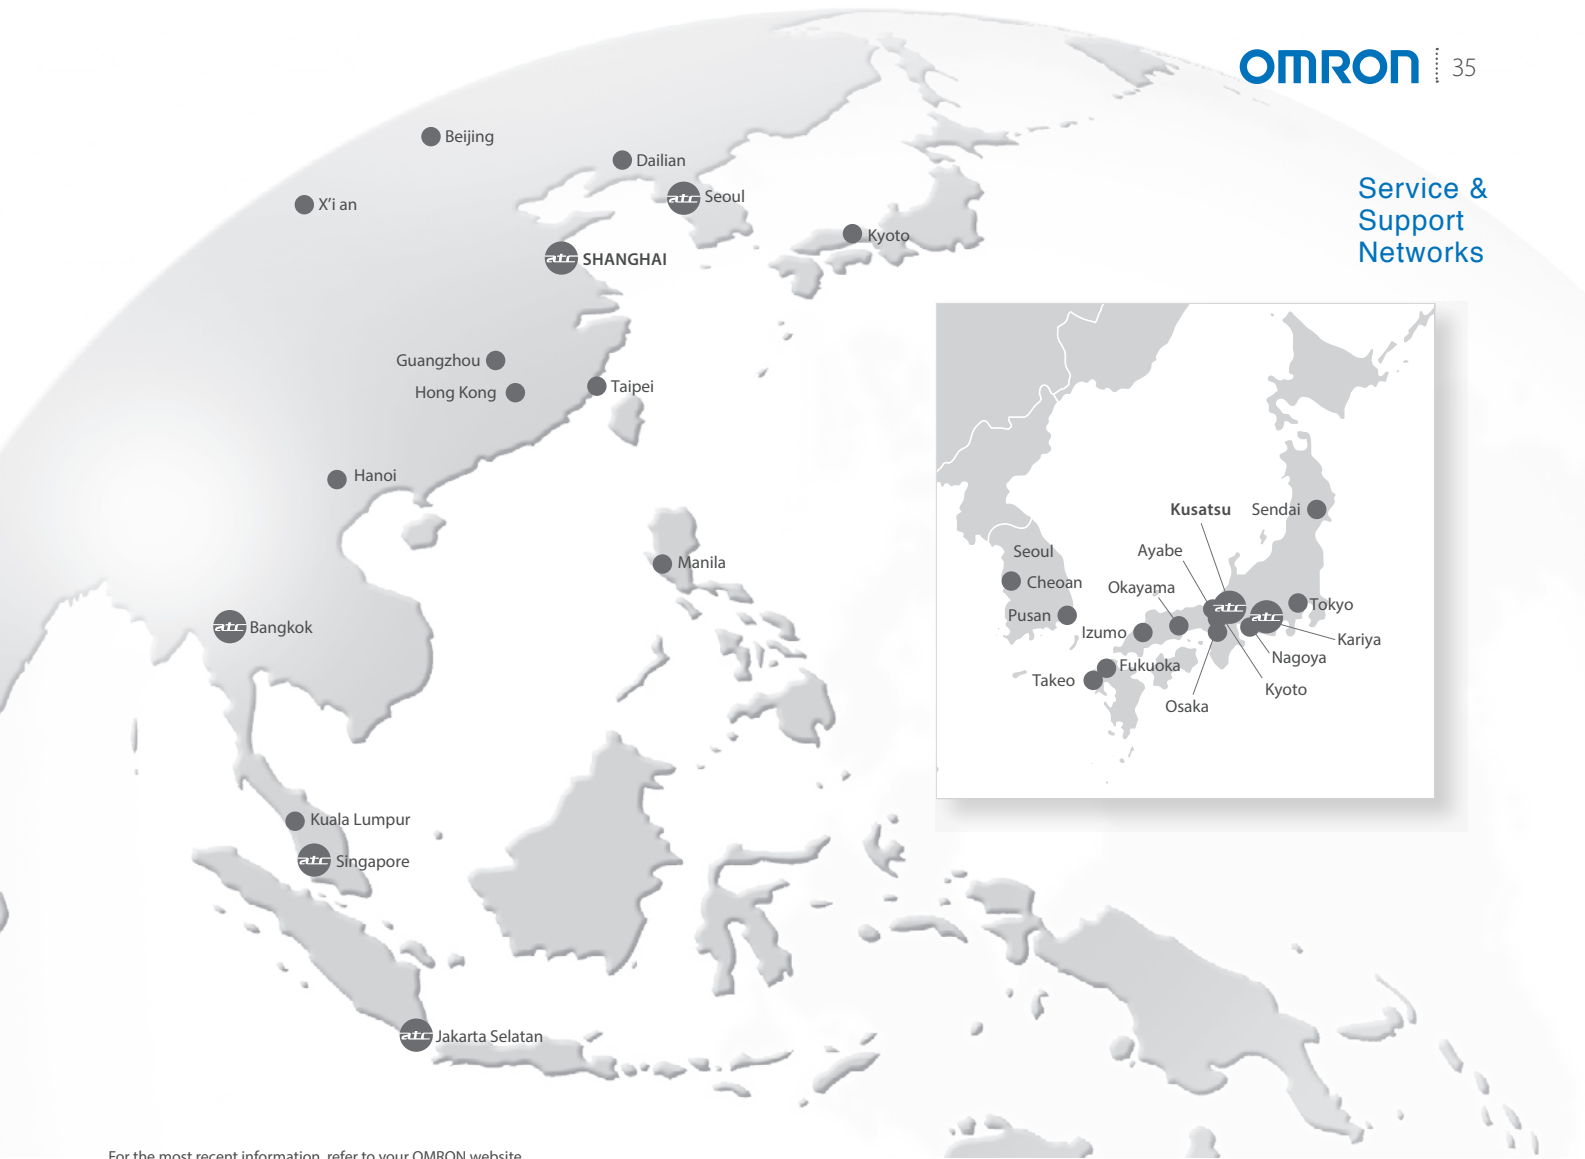

Our wide network of machine automation specialists will help you to select the right automation architecture and products to meet your requirements. Our flat structure based on expert-to-expert contact ensures that you will have ONE accountable and responsible expert to deal with on your complete project.

Proof of concept

As your project matures make use of our Automation centers to test and catch-up with technology trends in motion, robotics, networking, safety, quality control etc. and to interface, test and validate your complete system with our new machine network (EtherCAT) and factory network (EtherNet/IP).

We will assign a dedicated application engineer to assist with initial programming and proof testing of the critical aspects of your automation system. Our application engineers have in-depth expertise in and knowledge of networks, PLCs, motion, safety and HMIs when applied to machine automation.

Service & Support Networks

For the most recent information, refer to your OMRON website.

CONFIDENCE

ASSURANCE

Development

During your prototyping phase you will need flexibility in technical support, product supply and exchange. We will assign an inside sales contact to help you source the correct products fast during your prototyping phase.

Commissioning

With our world-wide network for service and support the export of your product is made simple, we will support you on-site with your customer, anywhere in the world. We can arrange a liaison sales engineer to facilitate training, spare parts supply or even machine commissioning. All this in a localised language with localised documentation - giving you complete peace of mind.

Serial production

As your production increases we will engage in supplying you within 24hrs and repairing within 3 days. All our products are global products meeting global standards - CE, cULus, NK, LR -
